

# INSTRUCTIONS

	You are about to converse with <b>ARIA</b> (Agent for Realistic Interactions and Analytics), an Artificial Intelligence Model.
	Ensure you're in a quiet location with a good microphone, preferably a headset, and good network connectivity.
	Be explicit with your responses; <b>ARIA</b> knows nothing about you, or the role you are practicing for, and cannot make any inferences.
	<b>ARIA</b> can use your responses to automatically create a performance report and provide suggestions on how you can improve.

On the next page, you can see a screenshot of the interaction interface showing all the elements you will notice during your interaction. Feel free to take some time to familiarize yourself with it before you get started, or dive straight in – everything should be self-explanatory!

## SCREENSHOT / INTERACTION ELEMENTS
